## September 2009, Climate

September mean temperature for the national average is $0.8^{\circ} \mathrm{C}$ higher than normal.
September precipitation for the national average is $35 \%$ relative to normal, making it the fifth lowest record since 1973.
$\square$ Climate characteristics of September, and its long-term trends are analyzed based on 60 meteorological stations across the Korea (national average) for the period of 1973-2009 (1908-2009 in Seoul).
$\square$ September, 2009 climate is as follows:
o For the national average,

- All of the mean $\left(21.0^{\circ} \mathrm{C}\right)$, mean maximum $\left(26.5^{\circ} \mathrm{C}\right)$, and mean minimum $\left(16.5^{\circ} \mathrm{C}\right)$ temperatures are $0.8^{\circ} \mathrm{C}$ higher than normal.
- the amount of precipitation ( 52.7 mm ) is $35.3 \%$ relative to normal, making it the fifth lowest record since 1973.
- the average rainy days ( 7.4 days) are 1.2 days less than normal.
o For Seoul,
- both the mean temperature $\left(21.8^{\circ} \mathrm{C}\right)$ and the mean minimum temperatures $\left(17.7^{\circ} \mathrm{C}\right)$ are $1.0^{\circ} \mathrm{C}$ higher than normal. The mean maximum temperature $\left(26.3^{\circ} \mathrm{C}\right)$ is $0.7^{\circ} \mathrm{C}$ higher than normal.
- The amount of precipitation ( 64.5 mm ) is $47 \%$ relative to normal.
- The average rainy days (6 days) are 2.7 day less than normal.
$\square$ Long term trend of September climate
o For the national average, mean, mean maximum, and mean minimum temperatures of September 2000 s are $0.8^{\circ} \mathrm{C}, 0.4^{\circ} \mathrm{C}$, and $1.3^{\circ} \mathrm{C}$ higher than those of the 1970 s , respectively.
o For Seoul, the mean minimum temperature of September 2000 s is $3.0^{\circ} \mathrm{C}$ and $1.4^{\circ} \mathrm{C}$ higher than those of the 1920 s and 1970 s, respectively.
o For the national average, precipitation and rainy days for 2000 s increased by $47 \%$ and 1.4 days compare to those of the 1970s, respectively.
※ Normal: average from 1971 to 2000.
※ National average is used average values of 60 meteorological stations starting from 1973.
※ In Seoul, data are analyzed from 1908.
※ 1920s: average from 1921 to 1930
※ 1970s: average from 1973 to 1980
※ 2000s: average from 2001 to 2009

## Appendix

Fig. 1. Time series of September temperatures (mean, mean maximum, and mean minimum), and precipitation across the South Korea for the period 1973-2009.

National average values of September meteorological elements (1973-2009).

| Elements (National) <br> average | September 2009 <br> (a) | Normals of <br> September(1971-2000) <br> (b) | a-b | rank since 1973 <br> (within 5th) |
| :---: | :---: | :---: | :---: | :---: |
