## December and the 2009 climate

The mean temperature for December was lower than normal by $0.3^{\circ} \mathrm{C}$, while the 2009 was $0.7^{\circ} \mathrm{C}$ warmer than normal.
The mean precipitation for December and the 2009 accounted for $\mathbf{1 1 0 . 6 \%}$ and $96.2 \%$, respectively, compared to normal.
$\square$ Climate characteristics of December and the 2009 climate, and its long-term trends are analyzed, based on 60 meteorological stations across Korea (national average) for the period of 1973-2009 (1908-2009 for Seoul).
$\square$ The climatological characteristics in December 2009 can be described as follows:
o For Korea, (whole nation)

- The mean temperature $\left(1.2^{\circ} \mathrm{C}\right)$ and the mean maximum temperature $\left(6.0^{\circ} \mathrm{C}\right)$ were $0.3^{\circ} \mathrm{C}$ and $1.1^{\circ} \mathrm{C}$ lower than normal, respectively, while the mean minimum temperature $\left(-3.1^{\circ} \mathrm{C}\right)$ was $0.1^{\circ} \mathrm{C}$ higher than normal.
- The amount of precipitation ( 30.3 mm ) was $111 \%$ of normal.
- The average number of rainy days (8.7 days) had 1.8 more day compared to normal.
o For Seoul,
- The temperature $\left(-1.0^{\circ} \mathrm{C}\right)$, mean maximum $\left(2.5^{\circ} \mathrm{C}\right)$, and mean minimum $\left(-4.2^{\circ} \mathrm{C}\right)$ temperatures were $1.2^{\circ} \mathrm{C}, 1.7^{\circ} \mathrm{C}$, and $0.8^{\circ} \mathrm{C}$ lower than normal, respectively.
- The amount of precipitation (21.5mm) accounted for $86.3 \%$ of the normal precipitation.
- The average number of rainy days (10 days) had 2.7 more day compared to normal.

The climatological characteristics during 2009 can be described as follows:
o For Korea,

- All of the mean $\left(13.1^{\circ} \mathrm{C}\right)$, mean maximum $\left(18.6^{\circ} \mathrm{C}\right)$, and mean minimum $\left(8.3^{\circ} \mathrm{C}\right)$ temperatures were $0.7^{\circ} \mathrm{C}$ higher than normal, respectively.
- The amount of precipitation ( 1265.7 mm ) was $96.2 \%$ of normal.
- Days with heavy precipitation above 30 mm per hour was 1.5 times greater than normal, making it the fourth highest rainfall on record since 1973.
- Days with heavy precipitation above 80 mm per day was 1.3 times greater than normal.
- The average number of rainy days (107.7 days) was 2.4 days more than normal.
o For Seoul,
- The mean $\left(13.0^{\circ} \mathrm{C}\right)$, mean maximum $\left(17.3^{\circ} \mathrm{C}\right)$, and mean minimum $\left(9.2^{\circ} \mathrm{C}\right)$ temperatures were $0.8^{\circ} \mathrm{C}, 0.4^{\circ} \mathrm{C}$, and $1.0^{\circ} \mathrm{C}$ higher than normal, respectively.
- The amount of precipitation ( 1564.0 mm ) was $116.3 \%$ of normal.
- The average number of rainy days (113 days) was 5.4 days more than normal.

## Long-term trend of December and the 2009 climate

o Korea's mean, mean maximum, and mean minimum temperatures from 2000 to 2009 were $0.7^{\circ} \mathrm{C}, 0.7^{\circ} \mathrm{C}$, and $0.8^{\circ} \mathrm{C}$ higher than those of the 1970 s , respectively.
o For Seoul, the mean minimum temperature of December during the 21 st century was $3.5^{\circ} \mathrm{C}$ and $0.8^{\circ} \mathrm{C}$ higher than those of the 1920 s and 1970 s , respectively.
o For Korea, foggy days during 2000 and 2009 were 3.4 days less than those of the 1970s, however, for Seoul, the figures are 18.1 days less than those of the 1970s.

```
※ Normal: average from 1971 to 2000.
※ National average is used average values of 60 meteorological stations starting from 1973.
* In Seoul, data are analyzed from 1908.
※ 1920s: average from 1921 to 1930
※ 1970s: average from 1973 to 1980
※ 2000s: average from 2001 to 2009
```

## Appendix 1. December, 2009 climate

Fig. 1. Temperatures (mean, mean maximum, and mean minimum), and precipitation across South Korea during December (1973-2009)
