## July 2010 Climate

The temperature was higher than normal, while the precipitation amount was similar to normal.
$\square$ Climate characteristics of July 2010 and their long-term trends are analyzed based on data from 60 meteorological stations in Korea (national values) for the period of 1973-2010 (1908-2010 for Seoul).
$\square$ The climatological characteristics of July 2010 were as follows:
o For Korea (national values):

- The mean $\left(25.3^{\circ} \mathrm{C}\right)$, mean maximum $\left(29.4^{\circ} \mathrm{C}\right)$, and mean minimum temperatures $\left(22.2^{\circ} \mathrm{C}\right)$ were $0.8^{\circ} \mathrm{C}, 0.6^{\circ} \mathrm{C}, 1.1^{\circ} \mathrm{C}$ higher than normal, respectively.
- The precipitation amount ( 263.5 mm ) was similar ( $100 \%$ ) to normal. The average number of rainfall days ( 16.1 days) increased by 2.3 days compared to normal; however, days with heavy precipitation above $150 \mathrm{~mm} /$ day ( 0.2 day) were the fifth highest on record (tied with 1984 and 2000) since 1973 (1st : 0.6 day in 1982; 2nd : 0.5 day in 1987 and 2009; 4th : 0.3 day in 1999).
o For Seoul:
- The mean $\left(25.8^{\circ} \mathrm{C}\right)$, mean maximum $\left(29.3^{\circ} \mathrm{C}\right)$, and mean minimum temperatures $\left(23.1^{\circ} \mathrm{C}\right)$ were $0.9^{\circ} \mathrm{C}, 0.5^{\circ} \mathrm{C}$ and $1.3^{\circ} \mathrm{C}$ higher than normal, respectively.
- The precipitation amount ( 239.2 mm ) was $27 \%$ lower than normal. The average number of rainfall days ( 17.0 days) increased by 1.5 days compared to normal; however, no days with heavy precipitation exceeding $30 \mathrm{~mm} / \mathrm{hour}$ and $150 \mathrm{~mm} /$ day were recorded.

## Long-term climate trend for July

o The precipitation amount for July 2010 in Korea was $108.2 \mathrm{~mm}, 45.5 \mathrm{~mm}$, and 89.6 mm higher than that of the 1970s, 1980s and 1990s, respectively; in contrast, the mean temperatures exhibited no changes over the years.
※ Normal: 30-year (1971-2000) average.
※ National average: Average of values collected from 60 meteorological stations since 1973.
※ The analyzed data for Seoul date back to 1908.
※ 1920s: Average from 1921 to 1930
※ 1970s: Average from 1973 (1971 for Seoul) to 1980
※ 2000s: Average from 2001 to 2009

## Appendix 1. July Climate Trends

Fig. 1. Temperatures (mean, mean maximum, and mean minimum) and precipitation for the Republic of Korea for July (1973-2010)
$\square$ July average values of meteorological elements across Korea (1973~2010)

| Elements (National) | July 2010 <br> (a) | Normals for July <br> (1971-2000) <br> (b) | $\mathrm{a}-\mathrm{b}$ | Rank since 1973 <br> (up to 5th) |
| :---: | :---: | :---: | :---: | :---: |
