## August and Summer (Jun.-Aug.) 2010 Climate

$\diamond$ The mean $\left(26.8^{\circ} \mathrm{C}\right)$ and mean minimum temperatures $\left(23.8^{\circ} \mathrm{C}\right)$ of August were the highest value on record since 1973, and the number of rainfall days (18.7 days) for August was the highest for the same period.
The mean minimum temperatures $\left(21.1^{\circ} \mathrm{C}\right)$ for summer 2010 were the highest values on record since 1973, and the rainfall days ( 44.2 days) for summer 2010 were the fourth highest for the same period.
$\square$ The climate characteristics of August and summer (June through August) 2010 and their long-term trends are analyzed based on data from 60 meteorological stations in Korea for the period of 1973-2010 (1908-2010 for Seoul).
$\square$ The climatological characteristics of August 2010 were as follows:
$\bigcirc$ For Korea (nationwide):

- The mean $\left(26.8^{\circ} \mathrm{C}\right)$ and mean minimum temperatures $\left(23.8^{\circ} \mathrm{C}\right)$ were $1.8^{\circ} \mathrm{C}$ and $2.5^{\circ} \mathrm{C}$ higher than normal, respectively, making August 2010 the warmest on record since 1973 , and the mean maximum $\left(31.0^{\circ} \mathrm{C}\right)$ was $1.4^{\circ} \mathrm{C}$ higher than normal (tied for highest value with 1994).
- The precipitation amount ( 374.5 mm ) was 109.5 mm higher than normal. The average number of rainfall days ( 18.7 days) increased by 6.1 days compared to normal, and is the highest on record since 1973.
$\bigcirc$ For Seoul:
- The mean minimum temperature $\left(23.8^{\circ} \mathrm{C}\right)$ was $1.7^{\circ} \mathrm{C}$ higher than normal, the fourth highest value on record since 1908 (1st : $24.4^{\circ} \mathrm{C}$ in 1994; 2nd : $24.1^{\circ} \mathrm{C}$ in 1967 ; 3rd: $23.9^{\circ} \mathrm{C}$ in 2006; 4th: 2007 and 2010), and the mean $\left(26.5^{\circ} \mathrm{C}\right)$ and mean maximum temperatures $\left(30.0^{\circ} \mathrm{C}\right)$ were $1.1^{\circ} \mathrm{C}$ and $0.5^{\circ} \mathrm{C}$ higher than normal, respectively.
- The precipitation amount ( 598.7 mm ) was 250.7 mm higher than normal. The average number of rainfall days ( 24.0 days) increased by 10.2 days compared to normal, and is the highest value on record since 1908.

## The climatological characteristics of summer 2010 (June-August) were as follows:

$\bigcirc$ For Korea (nationwide):

- The mean $\left(24.8^{\circ} \mathrm{C}\right)$ and maximum temperatures $\left(29.4^{\circ} \mathrm{C}\right)$ were $1.3^{\circ} \mathrm{C}$ and $1.2^{\circ} \mathrm{C}$ higher than normal, respectively, making summer 2010 the second warmest on record since 1973 (mean temp. 1 st: $25.3^{\circ} \mathrm{C}$ in 1994; max. temp. 1st: $30.5^{\circ} \mathrm{C}$ in 1994, 2nd: 1978 and 2010), and the mean minimum $\left(21.1^{\circ} \mathrm{C}\right)$ was $1.5^{\circ} \mathrm{C}$ higher than normal, the highest value for the same period.
- The precipitation amount ( 710.0 mm ) was 10.3 mm higher than normal. The average number of rainfall days ( 44.2 days) increased by 7.4 days compared to normal and is the fourth highest value on record since 1973 (1st: 47.8 days in 1998; 2nd: 47.2 days in 2003; 3rd: 46.2 days in 1980).
o For Seoul:
- The mean $\left(25.2^{\circ} \mathrm{C}\right)$ and minimum temperatures $\left(22.1^{\circ} \mathrm{C}\right)$ were $1.1^{\circ} \mathrm{C}$ and $1.5^{\circ} \mathrm{C}$ higher than normal, the fifth $\left(1\right.$ st: $26.3^{\circ} \mathrm{C}$ in 1994; $2 \mathrm{nd}: 25.6^{\circ} \mathrm{C}$ in 2000 ; $3 \mathrm{rd}: 25.5^{\circ} \mathrm{C}$ in 1997 ; 4th: $25.3^{\circ} \mathrm{C}$ in 1939) and second (1st: $22.7^{\circ} \mathrm{C}$ in 1994) highest values on record since 1908 , respectively. The mean minimum temperature $\left(29.2^{\circ} \mathrm{C}\right)$ was $0.8^{\circ} \mathrm{C}$ higher than normal.
- The precipitation amount ( 965.5 mm ) was 156.3 mm higher than normal. The average number of rainfall days ( 51 days) increased by 11.7 days compared to normal, and is the fifth highest value on record since 1908 (1st: 54 days in 1961; 2nd: 53 days in 1990; 3rd: 52 days in 1934 and 2003).

## $\square$ Long-term August and summertime climate trends

o The mean temperatures for August and summer 2010 in Korea were $0.4^{\circ} \mathrm{C}$ and $0.2^{\circ} \mathrm{C}$ higher compared with the 1970 's, respectively. The minimum temperatures for the 2000's were $0.7^{\circ} \mathrm{C}$ (August) and $0.5^{\circ} \mathrm{C}$ (summer) higher compared with the corresponding values for the 1970's, exhibiting an upward trend.
o The precipitation amounts for August and summer 2010 in Korea were $26.5 \%$ and $24.1 \%$ higher than the corresponding values for the 1970's.
