## September 2010 Climate

The temperature was higher than normal, while the precipitation amount was higher than normal.
$\square$ Climate characteristics of September 2010 and their long-term trends are analyzed based on data from 60 meteorological stations in Korea (national values) for the period of 1973-2010 (1908-2010 for Seoul).
$\square$ The climatological characteristics of September 2010 were as follows:
o For Korea (national statistics)

- The mean $\left(21.9^{\circ} \mathrm{C}\right)$, mean maximum $\left(27.0^{\circ} \mathrm{C}\right)$, and mean minimum temperatures $\left(18.1^{\circ} \mathrm{C}\right)$ were $1.7^{\circ} \mathrm{C}, 1.3^{\circ} \mathrm{C}$ and $2.4^{\circ} \mathrm{C}$ higher than normal, respectively.
- The precipitation amount ( 260.5 mm ) was higher than normal (174.4\%)

The average number of rainfall days ( 12.9 days) increased by 4.3 days compared to normal and the number of days with heavy precipitation exceeding $30 \mathrm{~mm} /$ hour $(0.7$ days) was the highest on record since 1973.
o For Seoul:

- The mean $\left(21.8^{\circ} \mathrm{C}\right)$, mean maximum $\left(26.0^{\circ} \mathrm{C}\right)$, and mean minimum temperatures $\left(18.5^{\circ} \mathrm{C}\right)$ were $1.0^{\circ} \mathrm{C}, 0.4^{\circ} \mathrm{C}$ and $1.8^{\circ} \mathrm{C}$ higher than normal, respectively.
- The precipitation amount ( 671.5 mm ) was higher than normal ( $488 \%$ ) and the highest on record since 1908.

The average number of rainfall days ( 13.0 days) increased by 4.3 days compared to normal and the number of days with heavy precipitation exceeding $30 \mathrm{~mm} /$ hour (3 days) was the highest on record since 1908.

## Long-term climate trend for September

o The September average temperatures for Korea in the 2000 's were $0.9{ }^{\circ} \mathrm{C}$ higher compared with the 1970 's. The mean maximum $\left(26.2^{\circ} \mathrm{C}\right)$, and mean minimum temperatures $\left(16.9^{\circ} \mathrm{C}\right)$ were $0.5^{\circ} \mathrm{C}$ and $1.4^{\circ} \mathrm{C}$ higher respectively compared with the corresponding values for the 1970's.
o The precipitation amount for the month of September for Korea in the 2000's was $56.4 \%$ higher than the corresponding values for the 1970's. The number of precipitation days for the same period was 10.2 days, an increase of 1.7 days over the 1970's.
※ Normal: 30-year (1971-2000) average.
※ National average: Average of values collected from 60 meteorological stations since 1973.
※ The analyzed data for Seoul date back to 1908.
※ 1920s: Average from 1921 to 1930
※ 1970s: Average from 1973 (1971 for Seoul) to 1980
※ 2000s: Average from 2001 to 2009

## Appendix 1. September Climate Trends

Fig. 1. Temperatures (mean, mean maximum, and mean minimum) and precipitation for the Republic of Korea for September (1973-2010)
$\square$ September averages of meteorological elements for Korea (1973~2010)

| Elements (National) | Sep 2010 <br> $(\mathrm{a})$ | Normals for Sep <br> $(1971-2000)$ <br> $(\mathrm{b})$ | $\mathrm{a}-\mathrm{b}$ | Ranking since <br> 1973 <br> (up to 5th) |
