## February and Winter, 2009 Climate

$\diamond$ National mean temperature of Winter is $1.5{ }^{\circ} \mathrm{C}$ higher than normal, making it the fifth highest record since 1973.
$\diamond$ National mean precipitation of Winter is $80 \%$ relative to normal.
$\diamond$ National mean temperature of February is $3.5{ }^{\circ} \mathrm{C}$ higher than normal, making it the highest record since 1973.
$\diamond$ Mean temperature of February in Pusan (the second largest city) and Taegu (the third largest city) show the highest since the beginning of observation in 1905, and 1909, respectively.
※ Every data in this text are shown Tables 1~4.
$\square$ Climate characteristics of February 2009 and Winter (December of 2008-February, 2009), and their long-term trends are analyzed based on 60 Korean meteorological stations (national average) for the period 1973-2009 (1908-2009 in Seoul).
o National mean winter temperature $\left(1.9^{\circ} \mathrm{C}\right)$ is $1.5^{\circ} \mathrm{C}$ higher than normal, and the amount of precipitation $(76.6 \mathrm{~mm})$ is $80 \%$ relative to normal.
o National mean temperature $\left(4.3^{\circ} \mathrm{C}\right)$ of February 2009 is $3.5^{\circ} \mathrm{C}$ higher than normal, making it the highest record since 1973.
o Mean temperature of February 2009 in Pusan and Taegu show the highest record since the beginning of observation in 1905, and 1909, respectively.
[February, 2009]
$\square$ February, 2009 climate is as follows:
o For the national average,

- the mean temperature $\left(4.3^{\circ} \mathrm{C}\right)$ is $3.5^{\circ} \mathrm{C}$ higher than normal, making it the highest record since 1973.
- the mean maximum temperature $\left(9.7^{\circ} \mathrm{C}\right)$ is $3.4^{\circ} \mathrm{C}$ higher than normal,
making it the second highest record since 1973.
- the mean minimum temperature $\left(-0.7^{\circ} \mathrm{C}\right)$ is $3.3^{\circ} \mathrm{C}$ higher than normal, making it the second highest record since 1973.
- the amount of precipitation ( 43.0 mm ) is $114.7 \%$ relative to normal.
- the average duration of sunshine (130.0 hours) is 38.2 hours shorter than normal, making it the second lowest record since 1973.

## o For Seoul

- the mean temperature $\left(2.9^{\circ} \mathrm{C}\right)$ is $3.2^{\circ} \mathrm{C}$ higher than normal, making it the third highest record since the observation begins in 1908.
- the mean maximum temperature $\left(6.8^{\circ} \mathrm{C}\right)$ is $2.7^{\circ} \mathrm{C}$ higher than normal.
- the mean minimum temperature $\left(-0.6^{\circ} \mathrm{C}\right)$ is $3.5^{\circ} \mathrm{C}$ higher than normal, making it the third highest record since the observation begins in 1908.
- the amount of precipitation ( 36.9 mm ) is $156.4 \%$ relative to normal.
- days with daily minimum temperature below $0^{\circ} \mathrm{C}$ (12.0 days) are 10.8 days shorter than normal, making it the second lowest record since the observation begins in 1908.
o For Pusan (second largest city)
- mean temperature of Pusan $\left(8.3^{\circ} \mathrm{C}\right)$ is $4.0^{\circ} \mathrm{C}$ higher than normal, making it the highest record since the beginning of observation in 1905. The mean minimum temperature $\left(5.0^{\circ} \mathrm{C}\right)$ is $4.5^{\circ} \mathrm{C}$ higher than normal, making it also the highest record since the beginning of observation in 1905.
o For Taegu (the third largest city)
- mean temperature of Taegu $\left(6.4^{\circ} \mathrm{C}\right)$ is $4.3^{\circ} \mathrm{C}$ higher than normal, making it the highest record since the beginning of observation in 1909.
[Winter (from December 2008 to February 2009)]
$\square$ Winter, 2009 climate is as follows:
o For the national average,
- the mean temperature $\left(1.9^{\circ} \mathrm{C}\right)$ is $1.5^{\circ} \mathrm{C}$ higher than normal, making it the fifth highest record since 1973.
- the mean maximum temperature $\left(7.5^{\circ} \mathrm{C}\right)$ is $1.6^{\circ} \mathrm{C}$ higher than normal,
making it the fourth highest record since 1973.
- the mean minimum temperature $\left(-3.0^{\circ} \mathrm{C}\right)$ is $1.3^{\circ} \mathrm{C}$ higher than normal.
- the amount of precipitation ( 76.6 mm ) is $79.5 \%$ relative to normal.
o For Seoul,
- the mean $\left(0.7{ }^{\circ} \mathrm{C}\right)$, mean maximum $\left(4.7^{\circ} \mathrm{C}\right)$, and mean minimum $\left(-2.9^{\circ} \mathrm{C}\right)$ temperatures are $1.6^{\circ} \mathrm{C}, 1.4^{\circ} \mathrm{C}$, and $1.7^{\circ} \mathrm{C}$ higher than normal, respectively.
- the amount of precipitation $(68.5 \mathrm{~mm})$ is $97.7 \%$ relative to normal.

[^0]Fig. 1. Time series of February temperatures (mean, mean maximum, and mean minimum), and precipitation across the South Korea for the period 1973-2009.

Fig. 2. Time series of Winter temperatures (mean, mean maximum, and mean minimum), and precipitation across the South Korea for the period 1973-2009.

Table 1. National average values of February meteorological elements (1973-2009)

| Elements <br> (National average) | Febr. 2009 (a) | Normals of Febr., (1971-2000) (b) | a-b | rank since 1973 (within 5th) | $\begin{gathered} \text { February } \\ 1970 \mathrm{~s} \\ (1973-1980) \end{gathered}$ <br> (c) | $\begin{gathered} \text { February } \\ 2000 \mathrm{~s} \\ (2001-2009) \end{gathered}$ <br> (d) | d-c |
