

## Monthly (August) and Seasonal (June-August) 2011 Cimate Summary.

$\diamond$ The monthly average of rainy days( 17.7 days) for August 2011 was the third highest in a record extending back to 1973. But, sunshine duration(111.5 hours) was the third lowest for the same period.
$\diamond$ The mean minimum temperature $\left(20.7{ }^{\circ} \mathrm{C}\right)$ for summer 2011 was the fourth highest in a record extending back to 1973. Also, the amount of precipitation( 1048.1 mm ) and the rainy days ( 48.3 days) were the first highest for the same period.
$\square$ Climate features of August 2011 and the Summer 2011 (June-August 2011) and their long-term trends are analyzed using 47 meteorological stations in Korea (the national average) during 1973-2011 (1908-2011 for Seoul).
$\square$ The climatological features in August 2011 can be described as follows:
o Korea (whole nation)

- The mean temperature $\left(25.2{ }^{\circ} \mathrm{C}\right)$ and the mean maximum temperature (29.2 $\left.{ }^{\circ} \mathrm{C}\right)$ were $0.0{ }^{\circ} \mathrm{C},-0.6{ }^{\circ} \mathrm{C}$ below-normal, respectively. The mean minimum temperature (22.3 ${ }^{\circ} \mathrm{C}$ ) was $0.7{ }^{\circ} \mathrm{C}$ above-normal.
- The monthly amount of precipitation ( 284.7 mm ) was $104 \%$ of normal.
- The monthly average of rainy days (17.7 days) was more than 4.5 days of normal, making it the third highest in a record extending back to 1973 (1st 18.5 days in 2010; 2nd 18.0 days in 1980; 3rd 17.7 days 2011).
- Days with heavy precipitation above $30 \mathrm{~mm} /$ hour ( 0.6 days) was the fifth highest in a record extending back to 1973 (1st 1.8 days in 1998; 2nd 1.4 days in 2010; 3rd 1.4 days 1995; 4th 1.4 days in 1987; 5th 1.2 days in 2011).
- The monthly average of sunshine duration (111.5 hours) was $64 \%$ of normal, making it the third lowest in a record extending back to 1973 (1st 98.8 hours in 1980; 2nd 100.2 hours in 2002; 3rd 111.5 hours in 2011).
- The mean temperature $\left(25.8{ }^{\circ} \mathrm{C}\right)$ and the mean minimum temperature $\left(23.0{ }^{\circ} \mathrm{C}\right)$ were $0.1{ }^{\circ} \mathrm{C}$ and $0.6{ }^{\circ} \mathrm{C}$ above normal, respectively. The mean maximum temperature ( $29.5{ }^{\circ} \mathrm{C}$ ) was $0.1{ }^{\circ} \mathrm{C}$ below normal.
- The monthly amount of precipitation ( 166.8 mm ) was $46 \%$ of normal.
- The number of rainy days ( 17.0 days) was more than 2.4 days of normal.
- The total of sunshine duration ( 94.0 hours) was $62 \%$ of normal, making it the fifth lowest in a record extending back to 1973 (1st 52.4 hours in 2002; 2nd 76.4 hours in 1980; 3rd 83.0 hours in 2003; 4th 85.7 hours in 1965; 5th 94.0 hours in 2011).

## The climatological characteristics of Summer 2011 (June-August) were as follows:

o Korea (whole nation)

- The mean temperature $\left(24.1{ }^{\circ} \mathrm{C}\right)$ and the mean maximum temperature $\left(28.4{ }^{\circ} \mathrm{C}\right)$ were $0.4{ }^{\circ} \mathrm{C}$ and $0.1{ }^{\circ} \mathrm{C}$ higher than normal, respectively. The mean minimum temperature (20.7 ${ }^{\circ} \mathrm{C}$ ) was $0.8^{\circ} \mathrm{C}$ higher than normal, making it the fourth highest in a record extending back to 1973 (1st $21.2{ }^{\circ} \mathrm{C}$ in 2010; 2nd $20.9{ }^{\circ} \mathrm{C}$ in 1978; 3rd $20.8{ }^{\circ} \mathrm{C}$ in 1994; 4th $20.7{ }^{\circ} \mathrm{C}$ in 2011).
- The seasonal amount of precipitation ( 1048.1 mm ) was 322.4 mm higher than normal, making it the first highest in a record extending back to 1973. The seasonal average of rainy days ( 48.3 days) increased by 10.9 days compared to normal and was the first highest in a record extending back to 1973.
- Days with heavy precipitation above $30 \mathrm{~mm} /$ hour ( 2.8 days) was the first highest.
- The seasonal average of sunshine duration (396.9 hours) was $79 \%$ of normal, making it the fourth lowest in a record extending back to 1973 (1st 359.4 hours in 2003; 2nd 380.4 hours in 1980; 3rd 393.2 hours in 1993; 4th 396.9 hours in 2011).
o Seoul
- The mean temperature $\left(24.1{ }^{\circ} \mathrm{C}\right)$ and the mean maximum temperature $\left(28.0{ }^{\circ} \mathrm{C}\right)$ were $0.2{ }^{\circ} \mathrm{C}$ and $0.4{ }^{\circ} \mathrm{C}$ lower than normal, respectively. The mean minimum temperature $\left(21.1{ }^{\circ} \mathrm{C}\right)$ was $0.3{ }^{\circ} \mathrm{C}$ higher than normal.
- The seasonal amount of precipitation ( 1702.3 mm ) was 810.2 mm higher than normal, making it the second highest in a record extending back to 1908 (1st 1783.7 mm in 1998; 2nd 1702.3 mm in 2011). The number of rainy days ( 52 days) increased by 11.2 days compared to normal, and is the third highest.(1st: 54 days in 1961; 2nd: 53 days in 1990; 3rd: 52 days in 2011).
- Days with heavy precipitation above $30 \mathrm{~mm} /$ hour ( 5.0 days) was the third highest.
(1st: 7 days in 1998; 2nd: 7 days in 1966; 3rd: 5 days in 2011)
- The total of sunshine duration (345.2 hours) was $76 \%$ of normal
$\square$ Long-term August and summertime climate trends
o The mean temperatures for August and summer 2000's in Korea were $0.4^{\circ} \mathrm{C}$ higher compared with the 1970's. The minimum temperatures for the 2000 's were $0.6^{\circ} \mathrm{C}$ (August) and $0.5^{\circ} \mathrm{C}$ (summer) higher compared with the corresponding values for the 1970's, exhibiting an upward trend.
o The precipitation amounts for August and summer 2000's in Korea were $26.2 \%$ and $28.5 \%$ higher than the corresponding values for the 1970's.
※ Normal: average from 1981 to 2010.
※ National average indicates average values of 47 meteorological stations starting from 1973.
※ In Seoul, data are analyzed from 1908.
※ 1920's: average from 1921 to 1930
※ 1970's: average from 1973 to 1980
※ 2000's: average from 2001 to 2010
