## Monthly (August) and Seasonal (June-August) 2012 Climate Summary.

The mean minimum temperature ( $23.1{ }^{\circ} \mathrm{C}$ ) for August 2012 nationwide was the second highest and the days of amount of precipitation greater than $80 \mathrm{~mm} /$ day was the third highest in a record extending back to 1973.

The mean minimum temperature ( $21.0{ }^{\circ} \mathrm{C}$ ) for Summer 2012 nationwide was the second highest and the mean temperature $\left(24.7^{\circ} \mathrm{C}\right)$ was the third highest in a record.

- The mean minimum temperature ( $22.1^{\circ} \mathrm{C}$ ) for Seoul was the second highest and the mean temperature $\left(25.5{ }^{\circ} \mathrm{C}\right)$ was the third highest in a record extending back to 1908 .
$\square$ Climate features of August and Summer 2012 and their long-term trends are analyzed using 45 meteorological stations in Korea (the national average) during 1973-2012 (1908-2012 for Seoul).
※ Normal : average from 1981 to 2010.
$\square$ The climatological characteristics in August 2012 can be described as follows:
o For Korea (whole nation),
- The mean temperature $\left(26.4{ }^{\circ} \mathrm{C}\right.$ ) and the mean maximum temperature ( $30.7{ }^{\circ} \mathrm{C}$ ) and the mean minimum temperature ( $23.1{ }^{\circ} \mathrm{C}$ ) were $1.3{ }^{\circ} \mathrm{C}, 0.9{ }^{\circ} \mathrm{C}, 1.6{ }^{\circ} \mathrm{C}$ above-normal, respectively. In addition the mean temperature at August 2012 was the fifth highest and the mean minimum temperature second highest in a record extending back to 1973.
- 'Days of maximum temperature greater than $30^{\circ} \mathrm{C}$ ' were 2.6 days above-normal and 5.1 days more than those in 2011.
- The nationally averaged precipitation ( 408.5 mm ) was $149 \%$ of normal and the fifth highest in a record. The days of rain ( 16.4 days) was 3.2 days above-normal and 1.3 days smaller than those in 2011.
- 'Days of amount of precipitation greater than $80 \mathrm{~mm} /$ day' were 0.7 days above-normal and the third highest in a record extending back to 1973.
- The total of sunshine duration (155.9 hours) was 17.8 hours below-normal.
o For Seoul,
- The mean temperature $\left(27.1{ }^{\circ} \mathrm{C}\right)$, the mean maximum temperature $\left(30.9{ }^{\circ} \mathrm{C}\right)$, and the mean minimum temperature ( $23.9{ }^{\circ} \mathrm{C}$ ) were $1.3 \sim 1.5{ }^{\circ} \mathrm{C}$ above-normal. Also, the mean temperature was the fourth highest, the mean minimum temperature was the third highest in a record extending back to 1908.
- 'Days of maximum temperature greater than $30^{\circ} \mathrm{C}$ ' were 0.5 days above-normal.
- The monthly amount of precipitation ( 464.9 mm ) was $128 \%$ of normal, the days of rain ( 16.0 days) was 1.4 days above-normal.
- The total of sunshine duration (158.7 hours) was 6.2 hours above-normal.
※ Updated in monthly temperature and precipitation extremes (up to the fifth ranked)
o Temperature extremes (warm extremes)
- The mean temperature ( 24 stations) : Suwon $31.9{ }^{\circ} \mathrm{C}$, Seoul $31.8{ }^{\circ} \mathrm{C}$ and so on
- The maximum temperature (24 stations) : Yeongwol $38.7{ }^{\circ} \mathrm{C}$, Jeonju $38.3{ }^{\circ} \mathrm{C}$ and so on
- The minimum temperature ( 12 stations) : Incheon $28.2{ }^{\circ} \mathrm{C}$, Seogwipo $28.2{ }^{\circ} \mathrm{C}$ and so on o Precipitation extremes (increased intensity)
- Daily precipitation (3 stations) : Yeosu 308.9 mm and so on
- 1-hour precipitation (5 stations) : Haenam 87.5 mm , Jindo 76.0 mm and so on
- 10-minutes precipitation (3 stations) : Haeman 87.5 mm and so on
$\square$ The climatological characteristics in Summer 2012 can be described as follows:
o For Korea (whole nation),
- The mean temperature $\left(24.7{ }^{\circ} \mathrm{C}\right)$ and the mean maximum temperature $\left(29.2{ }^{\circ} \mathrm{C}\right)$ and the mean minimum temperature $\left(21.0 \quad{ }^{\circ} \mathrm{C}\right)$ were $0.8 \sim 1.3{ }^{\circ} \mathrm{C}$ above-normal. and the mean and the third, fifth, second highest in a record extending back to 1973, respectively.
- 'Days of maximum temperature greater than $30^{\circ} \mathrm{C}$ ' were 5.4 days above-normal.
- The nationally averaged precipitation ( 770.6 mm ) was $106 \%$ of normal and 47.4 mm above-normal, the days of rain ( 38.3 days) was 1.0 days above-normal.
- 'Days of amount of precipitation greater than $30 \mathrm{~mm} /$ hour' were 0.6 days above-normal and the fifth highest in a record extending back to 1973.
- The total of sunshine duration ( 505.2 hours) was 2.2 hours above-normal.
※ The 1.5 cm diameter hail event occurred in Cheongju and Cheonan on 12 June 2012.
o For Seoul,
- The mean temperature $\left(25.5{ }^{\circ} \mathrm{C}\right)$, the mean maximum temperature $\left(29.9{ }^{\circ} \mathrm{C}\right)$, and the mean minimum ( $22.1{ }^{\circ} \mathrm{C}$ ) were above-normal. Also, the mean temperature was the third highest and the mean minimum temperature was the second highest in a record extending back to 1908.
- 'Days of maximum temperature greater than $30^{\circ} \mathrm{C}$ ' were 9.8 days above-normal.
- The monthly amount of precipitation ( 1005.7 mm ) was $113 \%$ of normal, the days of rain ( 37.0 days) was 3.6 days below-normal.
- The total of sunshine duration ( 534.7 hours) was $118 \%$ of normal and 80.1 hour above-normal.
- Days of thunder storm ( 9.0 days) were 3.6 days below-normal and 9.0 days smaller than those in 2011.

## $\square$ Long-term trend of August and Summer climate

o For Korea (whole nation),

- National mean temperatures of August and Summer 2000s (2001-2010) were $0.4{ }^{\circ} \mathrm{C}$ and $0.3{ }^{\circ} \mathrm{C}$ higher than those of the 1970s. Also, the mean minimum temperatures of August and Summer 2000s were $0.7{ }^{\circ} \mathrm{C}$ and $0.5{ }^{\circ} \mathrm{C}$ higher than those of the 1970s.
- Nationally averaged precipitation in August and Summer 2000s were 58.8 mm and 154.2 mm larger than those of the 1970s. And days of rain in August and Summer 2000s were 2.4 days and 3.3 days larger than those of the 1970 s, respectively.
- Nationally total of sunshine duration of August and summer 2000s were 30.2 hours and 84.3 hours less than those of the 1970s.
o For Seoul,
- The mean temperatures of August and Summer 2000s were $0.9{ }^{\circ} \mathrm{C}$ and $0.6{ }^{\circ} \mathrm{C}$ higher than those of the 1970s. Also, the mean minimum temperatures of August and Summer 2000s were $1.0{ }^{\circ} \mathrm{C}$ and $0.8{ }^{\circ} \mathrm{C}$ higher than those of the 1970 s.
- Nationally averaged precipitation in August and Summer 2000s were 48.5 mm and 248.8 mm larger than those of the 1970s. And days of rain in August and Summer 2000s were 2.4 days and 4.5 days larger than those of the 1970s, respectively.
- Nationally total of sunshine duration of August and summer 2000s were 8.5 hours and 57.9 hours less than those of the 1970s.

## Appendix 1. Climate features in August 2012

Fig. 1. Temperatures (mean, mean maximum, and mean minimum), and precipitation in South Korea during August 1973-2012.
