Monthly (August) and Seasonal (Summer : June-August) 2013 Climate Summary
The mean temperature $\left(27.3{ }^{\circ} \mathrm{C}\right.$ ) of August 2013 nationwide is above normal and the monthly precipitation ( 164.0 mm ) is below normal.

- The mean temperature and maximum temperature of August 2013 nationwide are the warmest on a record extending back to 1973.
The mean temperature $\left(25.4{ }^{\circ} \mathrm{C}\right)$ of summer 2013 nationwide is above normal and precipitation ( 567.5 mm ) is nearly normal.
- The mean temperature and minimum temperature of Summer 2013 nationwide are the warmest on a record extending back to 1973.
$\square$ Climate features and long-term trends of August and Summer 2013 have been analyzed with the data collected at the 45 meteorological stations throughout Korea (national average) from 1973 to 2013 (1908-2013 for Seoul).
※ Normal : Average value of climatic element data collected from 1981 to 2010

## $\square$ The climatic characteristics of August 2013 are described as follows:

o For Korea (whole country),

- The mean temperature $\left(27.3{ }^{\circ} \mathrm{C}\right)$, the mean maximum temperature $\left(32.3{ }^{\circ} \mathrm{C}\right)$ and the mean minimum temperature $\left(23.4{ }^{\circ} \mathrm{C}\right)$ were $2.2{ }^{\circ} \mathrm{C}, 2.5{ }^{\circ} \mathrm{C}$ and $1.9{ }^{\circ} \mathrm{C}$ above normals, respectively. The mean temperature and maximum temperature of August 2013 nationwide are the warmest, the mean minimum temperature is the seconde warmest on a record extending back to 1973.
- The nationally-averaged precipitation was 164.0 mm , which was $60 \%$ of normal. The number of the days of rain was 10.6 days, which was 2.6 days below normal.
- The total number of the hours of sunshine was 246.3 hours, which was $142 \%$ of normal.
o For Seoul,
- The mean temperature $\left(27.7{ }^{\circ} \mathrm{C}\right)$, the mean maximum temperature $\left(31.1{ }^{\circ} \mathrm{C}\right)$ and the mean minimum temperature $\left(24.8{ }^{\circ} \mathrm{C}\right)$ were $2.0{ }^{\circ} \mathrm{C}$, $1.5{ }^{\circ} \mathrm{C}$ and $2.4{ }^{\circ} \mathrm{C}$ above normals, respectively. The mean temperature of August 2013 is the seconde warmest, the mean minimum temperature is the warmest on a record extending back to 1908.
- The amount of precipitation was 148.6 mm , which was $41 \%$ of normal, which was below normal.
- The number of the days of rain was 12.0 days, which is 2.6 days less than normal.
- The total number of the hours of sunshine was 217.9 hours, which was $143 \%$ of normal.

## The climatic characteristics of summer 2013 are described as follows:

o For Korea (whole country),

- The mean temperature $\left(25.4{ }^{\circ} \mathrm{C}\right)$, the mean maximum temperature $\left(30.1{ }^{\circ} \mathrm{C}\right)$ and the mean minimum temperature $\left(21.7{ }^{\circ} \mathrm{C}\right)$ were $1.8{ }^{\circ} \mathrm{C}, 1.7{ }^{\circ} \mathrm{C}$ and $2.0{ }^{\circ} \mathrm{C}$ above normals, respectively. The mean temperature and minimum temperature of Summer 2013 nationwide are the warmest, the mean maximum temperature is the seconde warmest on a record extending back to 1973.
- The nationally-averaged precipitation was 567.5 mm , which was $78 \%$ of normal. The number of the days of rain was 37.1 days, which was 0.2 days less than normal.
- The total number of the hours of sunshine was 586.1 hours, which was $117 \%$ of normal.
o For Seoul,
- The mean temperature $\left(25.9{ }^{\circ} \mathrm{C}\right)$, the mean maximum temperature $\left(29.5{ }^{\circ} \mathrm{C}\right)$ and the mean minimum temperature $\left(22.9{ }^{\circ} \mathrm{C}\right)$ were $1.6{ }^{\circ} \mathrm{C}, 1.1{ }^{\circ} \mathrm{C}$ and $2.1{ }^{\circ} \mathrm{C}$ above normals, respectively. The mean temperature of Summer 2013 is the seconde warmest, the mean minimum temperature is the warmest on a record extending back to 1908.
- The amount of precipitation was 853.1 mm , which was $96 \%$ of normal, which was nearly normal.
- The number of the days of rain was 46.0 days, which is 5.2 days more than normal.
- The total number of the hours of sunshine was 542.9 hours, which was $119 \%$ of normal.

## Long-term trend of August and Summer 2013 climate

o For Korea (whole country),

- The national mean temperatures of August and Summer 2000s (2001-2010) are $0.4{ }^{\circ} \mathrm{C}, 0.3{ }^{\circ} \mathrm{C}$ above those of the same month and season of 1970 s .
- The nationally-averaged precipitation of August and Summer 2000s (2001-2010) are $58.8 \mathrm{~mm}, 154.2 \mathrm{~mm}$ more than that of the same month and season of 1970 s , respectively.
- The number of the days of rain of August and Summer 2000s are 2.4 days, 3.3 days more than those of the same month and season of 1970s.
- The total sunshine of August and Summer 2000s are 30.2 hours, 84.3 hours less than those of the same month and season of 1970s, respectively.
o For Seoul,
- The mean temperatures of August and Summer 2000s (2001-2010) are $0.9{ }^{\circ} \mathrm{C}$, $1.1{ }^{\circ} \mathrm{C}$ above those of the same month and season of 1970s.
- The precipitation of August and Summer 2000s (2001-2010) are 48.5 mm , 248.8 mm more than that of the same month and season of 1970s.
- The number of the days of rain of August and Summer 2000s are 2.4 days, 4.5 days more than those of the same month and season of 1970s, respectively.
- The total sunshine of August and Summer 2000s are 8.5 hours, 57.9 hours less than those of the same month and season of 1970s, respectively.

## Appendix 1 Climate features of August 2013[Nationwide]
