## July 2009, Climate

July mean temperature for the national average is $0.8^{\circ} \mathrm{C}$ lower than normal. July precipitation for the national average is $86 \%$ greater than normal.
$\square$ Climate characteristics of July, and its long-term trends are analyzed based on 60 Korean meteorological stations (national average) for the period 1973-2009 (1908-2009 in Seoul).
$\square$ July, 2009 climate is as follows:
o For the national average,

- the mean temperature $\left(23.7^{\circ} \mathrm{C}\right)$ is $0.8^{\circ} \mathrm{C}$ lower than normal. The mean maximum $\left(27.9^{\circ} \mathrm{C}\right)$ and the mean minimum $\left(20.3^{\circ} \mathrm{C}\right)$ temperatures are $0.9^{\circ} \mathrm{C}$ and $0.8^{\circ} \mathrm{C}$ lower than normal, respectively.
- the amount of precipitation ( 490.6 mm ) is $86 \%$ greater than normal, making it the second highest record since 1973.
- the average rainy days (19 days) are 5.2 day greater than normal.
- days with heavy precipitation above $30 \mathrm{~mm} / 1$ hour are 3.6 times greater than normal, making it the highest record since 1973.
- days with heavy precipitation above $80 \mathrm{~mm} /$ day and above 150 mm /day are 3.2 times and 5 times greater than normal, respectively.
o For Seoul,
- both the mean temperature $\left(24.3^{\circ} \mathrm{C}\right)$ and the mean maximum temperature $\left(28.2^{\circ} \mathrm{C}\right)$ are $0.6^{\circ} \mathrm{C}$ lower than normal. The mean minimum temperatures $\left(21.0^{\circ} \mathrm{C}\right)$ is $0.8^{\circ} \mathrm{C}$ lower than normal.
- The amount of precipitation $(659.4 \mathrm{~mm})$ is 2 times greater than normal
- The average rainy days ( 20 days) are 4.5 days greater than normal.

## $\square$ Long term trend of July climate

o days with heavy precipitation (above $30 \mathrm{~mm} / 1$ hour, $80 \mathrm{~mm} /$ day, $150 \mathrm{~mm} /$ day) during 2000s increased approximately 2 times compared to those of the 1970s for the national average, and approximately 3 times for the Seoul.
※ Normal: average from 1971 to 2000.
※ National average is used average values of 60 meteorological stations starting from 1973.
※ In Seoul, data are analyzed from 1908.
※ 1910s: average from 1911 to 1920
※ 1970s: average from 1973 to 1980
※ 2000s: average from 2001 to 2009

## Appendix

Fig. 1. Time series of July temperatures (mean, mean maximum, and mean minimum), and precipitation across the South Korea for the period 1973-2009.

National average values of July meteorological elements (1973-2009)

| Elements (National) average | July 2009 <br> (a) | Normals of <br> July <br> $(1971-2000)$ <br> (b) | a-b | rank since <br> 1973 <br> (within 5th) |
| :---: | :---: | :---: | :---: | :---: |
| mean temperature $\left({ }^{\circ} \mathrm{C}\right)$ | 23.7 | 24.5 | -0.8 | - |
